# Laying Instructions

---

Before laying of ceramic material, you should take the following aspects into account.

- Check if the ceramic material is suitable for the selected site, according to its specifications and technical characteristics.
- Check whether there is enough material to conclude the work.
- Check the boxes to see confirm in the boxes if the product is the same shade, choice and caliber.

The good performance of the ceramic material depends strongly on the conditions of application for which it is extremely important to ensure the following assumptions.

## 01

### **BASE**

The base must be stable, free of debris, dust and cracks. curing times and stability of the treatments to which the support may have been subjected should be respected, you should check its flatness and stabilize it, if necessary with the help of products suitable for the purpose.

## 02

### **MATERIAL**

For a better visual effect of the product, it is advisable to use alternating ceramic pieces taken from various packages simultaneously, if the product has shade variations or has different graphics and shades, it should be applied randomly.

## 03

### **JOINTS FOR TILE - LAYING**

For a perfect application of the ceramic pieces, you should definitely use joints. They fulfill important aesthetic and technical functions, facilitating alignment of the materials, absorbing any possible deformation liable to be felt in the structure thus preventing the transmission of deformations to the ceramic pieces.

## 04

### **PACKAGING WASTE MANAGEMENT**

Packaging waste should be placed in locations available for recycle, namely in Eco points or adequate systems.
